# Rodrigo Ramos

**Java Technical Lead | Microservices | Spring Boot · Quarkus | 15 Years of Java**
Email: rodrigoror@gmail.com | Mobile: +34 622 933 051 | Spain, open to remote work across Europe
LinkedIn: linkedin.com/in/rodrigo-oliveira-ramos | Portfolio: rodrigoror.github.io/portifolio

## Summary

Technical lead with 20+ years in software and 15 years of hands-on Java, from Spring and Oracle enterprise systems to Quarkus microservices in a fintech. I currently manage 16 engineers across product, SRE and architecture squads, and before that led a Java, Node.js and Flutter squad as Senior Technical Lead, owning architecture standards, code reviews and releases.

I design microservices and integrations that hold up in production: a zero-downtime migration of 100,000 credit-card customers, third-party integrations at 99.9% uptime, and quality gates (TDD, SonarQube, 80% coverage) that cut unplanned war-rooms by 80%. Executive MBA in Solutions Architecture, with a capstone in Clean Architecture for Java and Quarkus. Portuguese (native), English (full professional), Spanish (limited working).

## Technical Skills

**Java & frameworks:** Java, Spring Boot, Spring Framework, Quarkus, Jooby, Vaadin, PrimeFaces, Demoiselle, JVM performance tuning

**Architecture:** Microservices, event-driven architecture (AWS SQS/SNS), REST and GraphQL API design, Clean Architecture, design patterns, SOLID, OOP, DDD, C4 model

**Databases:** Oracle, PostgreSQL (AWS RDS), MySQL, MSSQL, MongoDB, Redis, DynamoDB

**Cloud & DevOps:** AWS (SQS, SNS, Lambda, Cognito, S3, EC2, RDS), Docker, Kubernetes, Git, GitLab CI, GitHub Actions, SonarQube, JBoss/WildFly

**Quality & observability:** TDD, BDD, code reviews, quality gates, Cypress, Cucumber, Prometheus, Grafana, OpenTelemetry

**Leadership & process:** Technical leadership, mentoring, Agile (Scrum, Kanban, XP), BPMN (Camunda), AI-assisted development (Claude Code, Cursor, CodeRabbit)

**Also:** Node.js, TypeScript, Python, Flutter, Android

## Experience

### Engineering Manager · AI Engineering Strategy

**alt.bank (now novütech), fintech** | Dec 2023 – Present | São Paulo, Brazil (remote)

- Lead 16 people in four squads (two product squads, SRE and architecture); mentor tech and dev leads and built the team's performance evaluation system.
- Moved 100,000 credit-card customers from FIS to Pismo with zero downtime and zero refused transactions. Led 10 people (8 developers, 2 QAs), coordinated ~20 from Security, DevOps and four partner companies, and designed the migration application: field mapping, shadow-mode reconciliation and rollback at every stage.
- Architected a multi-tenant collections platform processing 400,000+ records a day for four tenants; revenue tripled, and its API layer cut partner onboarding from weeks to days.
- Cut unplanned war-rooms 80% with TDD, SonarQube quality gates in GitLab CI (80% coverage, no critical security findings) and AI-assisted code review.
- Raised delivery productivity 80%, measured by cycle time from spec to production, by building AI into every stage: spec review, coding, code review and spec-based test generation.
- Integrated a Banking-as-a-Service partner's APIs: 20 customer journeys in one week, 80% passing the first automated run.
- Replaced two paid tools with internal tools built on our own APIs, saving ~USD 2,000 a month.

*Stack:* Java, Node.js/TypeScript, GraphQL, MongoDB, AWS (SQS, SNS, Cognito), GitLab CI, SonarQube, Prometheus, Grafana, Kubernetes

### Senior Technical Lead · Java, Node.js, Flutter

**alt.bank, fintech** | Sep 2021 – Dec 2023 | São Paulo, Brazil

- Technical lead of a squad of 4–5 developers and a QA; owned architecture standards, code quality and releases across Java, Node.js and Flutter.

- Led the technical side of the move from a Banking-as-a-Service model to a proprietary credit card integrated with FIS and Visa: real-time transaction processing and continuous risk evaluation.
- Owned third-party API and SDK integrations at 99.9% uptime for business-critical flows.
- Set the architecture standards, test coverage rules and code-review practices the squads followed, with zero critical bugs in production releases.
- Rebuilt onboarding as a Camunda (BPMN) workflow and A/B tested a 15+ screen flow, bringing voluntary drop-off close to zero.
- Ran weekly delivery reviews on telemetry and velocity data to find bottlenecks, and mentored developers with individual growth plans.

*Stack:* Java, Quarkus, Camunda (BPMN), Node.js, Flutter, SonarQube, GitLab CI/CD

### Full Stack Developer · Java / Flutter

**alt.bank, fintech** | Dec 2018 – Sep 2021 | Remote

- Core developer on the founding product team, building the banking app and its backend from scratch; delivered the MVP in 3 months.
- Built Java backend services with Quarkus and Jooby, designed so major backend changes, including a full credit-card integration, landed without rewriting the core.
- Added SonarQube to the CI/CD pipeline and reached 80% code coverage on frontend and backend.
- Cut post-launch issues 30% with automated UI tests that caught regressions before each production deploy.

*Stack:* Java, Quarkus, Jooby, Flutter (Bloc), Clean Architecture, SonarQube, CI/CD, Git

### Senior Developer

**As2 Group** (for Johnson & Johnson medical devices) | Aug 2016 – Aug 2018 | São José dos Campos, Brazil

- Built Java (Spring Boot, PrimeFaces) traceability and GS1 labeling systems for the Quality Assurance area of a medical-device plant, in a regulated, audited environment.
- Integrated legacy VB6 and MSSQL systems with new production lines for end-to-end traceability, with zero downtime during the cutover.

*Stack:* Java, Spring Boot, PrimeFaces, MySQL, MSSQL, JBoss WildFly

### Senior Fullstack Engineer (Freelance)

**RRLabs Serviços** | Jan 2012 – Dec 2018 | Remote, alongside full-time roles

- Ran almost 100 backend and mobile projects end to end, from scope and estimate to delivery and handover.
- Built and tuned full-stack Java systems with Spring, Vaadin and Oracle/MySQL, including server and query tuning, and moved client codebases to Clean Architecture.

### Systems Analyst

**Urbam (municipal urban-services company)** | Feb 2011 – May 2016 | São José dos Campos, Brazil

- Made request processing 30% more efficient by tuning JBoss/WildFly and the JVM: less garbage collection, and database access only when needed.
- Developed and maintained Java web applications (Spring, Demoiselle, Oracle) and native Android apps for field workers; introduced Scrum and Kanban to the team.

### Earlier roles

Lead Web Developer, Fundação Cultural Cassiano Ricardo (2008–2011) · Co-Founder, Rich Solutions, a custom-software startup (2005–2007)

---

## Education & Certifications

### Executive MBA – Solutions Architecture

**XP Educação** | Sep 2023 – Aug 2024

Capstone: a Clean Architecture reference guide in Java and Quarkus, with observability and quality built in (Prometheus, OpenTelemetry, PostgreSQL, Docker, Kubernetes). View on GitHub

- Technologist in Systems Analysis and Development, Instituto Brasileiro de Tecnologia Avançado (2004–2006)
- Alura: Java Project Architecture and Design, Java SE Programmer I preparation, SOLID with Java, Design Patterns, TDD with Java, BDD and Java, Maven (2020–2024)
- Scrum Master, Season Training (2017)
- Anthropic: AI Fluency: Framework & Foundations (2026)
