Rodrigo Ramos

Solutions Architect & Engineering Manager | AI Strategy for Engineering Teams | Agentic development, governance and delivery metrics | Fintech | Java · AWS
Spain

Summary

I help engineering organizations turn AI from a pile of tools into a delivery strategy.I'm an Engineering Manager at alt.bank (now novütech), a Brazilian fintech, leading 16 people across product, SRE and architecture squads. I have 20+ years in software and an Executive MBA in Solutions Architecture. I work where solutions architecture meets AI adoption: deciding where agents belong in the engineering lifecycle, how to govern them, and how to tell whether they're paying off.What that looks like at alt.bank:• Made AI part of every delivery stage (spec, code, review, tests) with Claude Code, Cursor and CodeRabbit: 80% higher productivity, measured by cycle time from spec to production, and 80% fewer production war-rooms.• Built custom Claude skills and MCP servers (database, Grafana, Kubernetes) so agents work against our real systems. They write bug cards in a standard format, generate Cypress tests for every customer journey, and check each change against known customer issues.• Migrated 100,000 credit-card customers from FIS to Pismo with zero downtime and zero refused transactions, using Claude to compare schemas and write the data-mapping scripts.• Replaced Retool and a paid PIX transfer system with AI-built internal tools, saving about USD 2,000 a month. When you already own the APIs, AI makes building cheaper than buying.Under the AI work is a solid engineering base: microservices on AWS (SQS, SNS) with Java (Quarkus, Jooby, Spring), JVM tuning, TDD and SonarQube quality gates, and years of mentoring tech leads. I also co-founded a startup and spent seven years consulting, so I think in cost, risk and business outcomes, not just diagrams.What I believe: AI doesn't replace architecture, it raises the stakes. The teams that get the most from agents are the ones with clear specs, good tests and real guardrails for security and data.I write about AI-native engineering and architecture at https://rodrigoror.github.io/portifolio/

Experience

alt.bank

8 years

Engineering Manager · AI Engineering Strategy

December 2023 - Present (3 years)

São Paulo, Brazil

I lead 16 people in four squads (two product squads, SRE and architecture) behind alt.bank's (now novütech) collections and chatbot products, and I own how our teams use AI. I report to the business team and C-level.

AI engineering strategy

• Raised productivity 80%, measured by cycle time from spec to production: agents challenge the spec, Claude Code and Cursor write the code, CodeRabbit and a business-rules RAG agent review it, and tests come from the spec.

• Built Claude skills and MCP servers (database, Grafana, Kubernetes) so agents work on real systems: bug cards, Cypress tests for every journey, SRE checks against known issues.

• Led the AI POCs that became our chatbot: up to 90% of messages resolved without a human, against 70% for a conventional bot. Shut down the WhatsApp channel when its cost outweighed the gain.

Solutions architecture

• Moved 100,000 credit-card customers from FIS to Pismo with zero downtime and zero refused transactions. Led 10 people (8 devs, 2 QAs) and coordinated ~20 from Security, DevOps, Pismo, Dock, Celcoin and Unico. Designed the migration app: field mapping, shadow-mode reconciliation, rollback at every stage.

• Architected the multi-tenant Wolfe collections platform (Node.js/TypeScript, GraphQL, MongoDB, AWS Cognito): 400,000+ records a day, four financial-services tenants. Revenue tripled; GraphQL cut partner onboarding from weeks to days.

• Chose build over buy where we already owned the APIs: AI-built internal tools replaced Retool and a paid PIX transfer system, saving ~USD 2,000 a month.

• Integrated Celcoin's BaaS and LaaS APIs: 20 customer journeys in one week, 80% passing the first automated run.

Quality and leadership

• Cut unplanned war-rooms 80%: TDD, SonarQube gates in GitLab CI (80% coverage, no critical security findings), AI review first.
• Mentor tech and dev leads; built the team's performance evaluation system.

Senior Technical Lead - Java, NodeJS, Flutter
September 2021 - December 2023 (2 years 4 months)
São Paulo, Brazil

Technical lead of a squad (4–5 developers and a QA) building alt.bank's banking app and backend during its pivot from a Banking-as-a-Service model to its own credit card. I owned architecture standards, code quality and releases across Java, Node.js and Flutter.
• Led the technical side of the move from BaaS (Conductor/Dock) to a proprietary credit card integrated with FIS and Visa: a new app, real-time transaction processing and continuous risk evaluation. The credit product became the base of the business.
• Rebuilt onboarding as a Camunda (BPMN) workflow and ran A/B tests across a 15+ screen flow, bringing voluntary drop-off close to zero.
• Owned third-party API and SDK integrations at 99.9% uptime for the business-critical flows.
• Set the architecture standards, test coverage rules and code-review practices the squads followed, with zero critical bugs in production releases.
• Ran weekly delivery reviews on telemetry and velocity data to find bottlenecks, and mentored developers with individual growth plans.

Full Stack Developer - Java / Flutter
December 2018 - September 2021 (2 years 10 months)

Core developer on alt.bank's founding product team, building the banking app and its backend from scratch: from the first digital account to the credit card with dynamic limits.

• Delivered the banking app MVP in 3 months with Flutter and Clean Architecture (Bloc/MVC). Instrumented every screen, flow and error state from the first commit, so prioritization ran on real usage data from launch week.
• Designed the app so major backend changes, including a full credit-card integration, landed without rewriting the core.
• Built Java backend services with Quarkus and Jooby.
• Added SonarQube to the CI/CD pipeline and reached 80% code coverage on frontend and backend.
• Cut post-launch issues 30% with automated UI tests (Sikuli) that caught regressions before each production deploy.
• Worked from idea to MVP rollout with product, design and business.

RRLabs Serviços
Senior Fullstack Engineer (Freelance/Consultant)
January 2012 - December 2018 (7 years)
São Paulo - SP

Freelance consultancy I ran alongside my full-time roles for seven years: almost 100 mobile and backend projects of many kinds, for clients including Fullture (education), ContaPaga (finance) and the 1º Cartório de São José dos Campos (notary services).

• Built cross-platform mobile apps in Flutter (Bloc, MVC, MVU), from architecture to store release.
• Moved client codebases to Clean Architecture so features could be added without touching the core.
• Built and tuned full-stack systems with Vaadin, Spring and Oracle/MySQL, including server and query tuning for performance.
• Ran each engagement end to end: scope, estimate, delivery and handover.

As2 Group
Senior Developer
August 2016 - August 2018 (2 years 1 month)
São José dos Campos, São Paulo, Brazil

Embedded in the Quality Assurance area of Johnson & Johnson's medical-device plant, building the traceability and regulatory-compliance systems behind its production lines.

• Built Industry 4.0 web systems for GS1 labeling, so products met global regulatory labeling requirements.
• Integrated legacy VB6 and MSSQL systems with new production lines for end-to-end traceability, with zero downtime during the cutover.
• Built front and back ends with Java (PrimeFaces, Spring Boot), MySQL and JBoss WildFly.
• Ran UAT with quality and production teams in a regulated, audited environment.

Urbam (Urbanizadora Municipal S.A.)
System Analyst
February 2011 - May 2016 (5 years 4 months)
São José dos Campos, Brazil

Systems analyst at a Brazilian municipal company (urban services), building the web and mobile systems its staff used daily

• Made request processing 30% more efficient by tuning JBoss/WildFly and the JVM: less garbage collection, and database access only when needed.

• Built native Android apps (MVVM) that gave field workers remote access to company systems.
• Developed and maintained Java web applications (Demoiselle, Spring, Oracle).
• Introduced Scrum and Kanban to the development team.

Fundação Cultural Cassiano Ricardo
Lead Web Developer
April 2008 - February 2011 (2 years 11 months)
São José dos Campos, São Paulo, Brazil

Led the web team that digitized the key operations of São José dos Campos' municipal cultural foundation.
• Cut content-production costs 45% by moving content to a WordPress intranet and a Joomla public portal.
• Built the system that runs the city's cultural workshops (Joomla, T5 Framework).
• Led the team with Scrum, Kanban and XP, and mentored interns who went on to lead their own projects

Prefeitura Municipal de São José dos Campos
IT Support Assistant
April 2007 - April 2008 (1 year 1 month)
São José dos Campos, São Paulo, Brazil

Providing maintenance and direct technical support to users. Telephone support for Windows systems. Performing computer formatting and configuration, including partitioning and applying ISO images. Installation and configuration of hardware and software. Configuration, maintenance, and replacement of TrixTec brand electronic time clocks.

Rich Solutions
Co-Founder
January 2005 - April 2007 (2 years 4 months)
São José dos Campos Area, Brazil

Co-founded a software startup that built custom systems for regional businesses.
• Digitized the workflows of the 1º Cartório de São José dos Campos (notary and registry office), cutting service time.
• Automated production-line systems for Betel, an aerospace parts manufacturer.
• Built inventory and cost management for Artrock, a clothing maker.

• Stack: ColdFusion, Flash/ActionScript, HTML/CSS.

Entrepreneur

6 years

Technical Support

January 2000 - December 2005 (6 years)

Entrepreneur

Provided remote IT support and helpdesk assistance, specializing in home-based services. I helped clients enhance their computer performance by upgrading memory, expanding hard drive space, and optimizing hardware for improved speed and efficiency. My focus was on ensuring that clients' systems operated at peak performance, offering tailored solutions for better overall functionality.

Information Technology Teacher

January 2001 - January 2004 (3 years 1 month)

I trained business owners and employees of companies transitioning to the tech sector, addressing the need for personalized training due to the lack of time for regular courses. The training sessions were adapted to the clients' available schedules, providing flexibility and effectiveness in learning. I taught classes on Windows, Microsoft Office, OpenOffice, Adobe Suite, internet tools, and Corel Suite, equipping participants with practical skills applicable to their professional daily tasks.

Johnson & Johnson

Administrative Assistant

January 2004 - June 2005 (1 year 6 months)

São José dos Campos - SP

During my tenure at Johnson & Johnson Professionals, I actively participated in the "Lean Process" and "Process Excellence" programs, where I honed my skills in quality control, data analysis, and process optimization. I utilized the MicroSiga Protheus system to manage operations within the medical products line, ensuring high-quality standards and efficient workflows. By leveraging internal methodologies and custom applications, I contributed to effective quality management and continuous process improvement.

In my first paid role, I gained critical knowledge in medical product quality techniques, the importance of information traceability, and the value of quality audits. After undergoing quarterly audits, my team achieved a flawless record in internal audits, receiving zero strikes, and only one recommendation in an

international audit. This experience reinforced my commitment to maintaining rigorous quality standards and driving operational excellence.

Education

XP Educação

Executive MBA – Solutions Architecture, Software architecture design, Computer Software Design · (September 2023 - August 2024)

Instituto Brasileiro de Tecnologia Avançado

Technologist Analysis and Systems Development (B.Tech.), Gestão de Sistemas de Informação · (2004 - 2006)

University of Maryland College Park

Specialization, Computer Science · (2015 - 2015)

University of Toronto

Introduction To Swift Programming, IOS with Swift · (2015 - 2015)

Centro de Educação Profissional Hélio Augusto de Souza

Diploma of Technician in Telecommunications, Tecnologia em Telecomunicações · (2002 - 2003)
